losis Commission. By G. H.  
Kress, M. D..... 345

ENTERED AT SAN FRANCISCO, CAL. AS SECOND-CLASS MATTER

## THE MODERN DIAGNOSIS

# Anders and Boston's Medical Diagnosis

This modern diagnosis is both a *bedside* and a *laboratory diagnosis*, complete in every particular. The many new diagnostic signs described and illustrated in this book will prove of the greatest value to you. The *Kocher-Boston sign* in ophthalmic goiter, the *Wassermann-Noguchi* reaction, the ophthalmotuberculin, cutaneous tuberculin, and the other tuberculin reactions are all elaborately detailed. Particularly important are the *new diagnostic divisions of the abdomen* and the surface markings for heart, pleura, spleen, kidney and liver conditions, illustrated by photographs direct from the model. An entirely new feature in illustrating is the use of *moving pictures* to portray certain nervous diseases where gait, attitude, head tic, etc., are the main diagnostic signs. Two other features are the *pathologic definitions* heading the diseases, and the tables of *differential diagnoses*.

## The Medical Record, New York

"The association in its authorship of a celebrated clinician and a well-known laboratory worker is most fortunate, and insures a well-balanced treatment of problems that can be authoritatively discussed only by those having special knowledge and training in both of these fields. It is a text-book and work of reference that must long occupy a preeminent position."

Octavo of 1175 pages, with 435 illustrations. By James M. Anders, M.D., Ph.D., LL.D., Professor of the Theory and Practice of Medicine and of Clinical Medicine, and L. Napoleon Boston, A.M., M.D., Adjunct Professor of Medicine, Medico-Chirurgical College, Philadelphia. Cloth, \$6.00 net; Half Morocco, \$7.50 net.
